# IAQ Management in Mould and Dampness

Most of the premises in Hong Kong are air-conditioned and on average we spend more than 70% of our time indoor such as at homes and in offices. In fact, indoor environment has an essential impact on our health, comfort and productivity.

This seminar is organized by the IAQ information Centre with a view to enhancing the awareness on IAQ, and providing practical guidance to achieve effective IAQ management.

## **About Prof. David Miller:**

*Prof. Miller is a member of the Biosafety and Environmental Microbiology and Indoor Air Quality Committees of the American Industrial Hygiene Association. He helped to develop the public health guidelines on mould and dampness in the built environment including the original New York guidelines on mould in buildings. He has published over 350 papers on various aspects of fungi and fungal toxins and has co-written/edited 9 books on the public health aspects of fungi and on fungal toxins. He has received numerous awards for his work.*
